## A new era in education: flexible learning environments

All over the world, education systems have been shifting from traditional and teacher-centred practices where students remain passive listeners, to the concepts that put students in the centre of the classrooms while providing high interaction and different activities. School and classroom designs should be suitable for modern teaching methods that prepare students for academic success, their desired careers and 21st century citizenship.

In order to support innovative teaching methods such as project based learning or workshop practices, learning environments should be flexible and adaptable so that various learning activities can be applied simultaneously and effortlessly.

A flexible learning environment is essential for teachers to be able to answer to differing needs.

Modeo chair is mobile and flexible - allowing you to easily adapt seating arrangements to learning activities.

Student-centred classroom environments comprise various teaching forms in order to increase learning efficiency.

- individual learning
- partnership working
- lectures
- one on one learning
- small groups
- student presentations

configuration

### Mobility

- High flexibility so that the classrooms can be quickly transformed into desired designs for different activities.
- Research shows that the duration of immobility is negatively correlated with learning performance and student concentration. Activities involving interactive participation between students therefore boost learning efficiency and help students' focus.
- Swivel seat allows students to move throughout the classroom. With its castors, it takes just seconds to shift between all alternative classroom layouts such as partner work, group study and discussion mode, etc.

### Practicality

- Provides efficient solutions to various issues in classrooms.
- Thanks to its large storage, personal belongings do not crowd the aisles but still remain easily accessible to students.
- The worksurface, being larger than alternatives, allows students to use their equipment such as tablets and laptops without difficulty.
- In addition to accommodating both right and left handed students, the worktop can be adjusted to different body types and seating postures by moving forward and backward and by changing its angle.

### Ergonomics

- Modeo accommodates different body types, postures and seating habits. Students in the same age group are often forced to use desks with the same dimensions, and, on average, spend 4 hours sitting each day. It is possible for physical problems to turn into chronic issues, and hence it is essential for the furniture to be designed ergonomically.
- Large seating shell offers comfort for different body types and sizes. With its lumbar support and flexible body, it prevents back and spine problems while providing comfortable sitting. The armrests support the arms and elbows of the user to minimize fatigue.
- The concave and convex sides of the X-Base give the user the options of resting the feet on the floor or on the base. As a result, users with different leg lengths or seating habits can use the chair in a practical way without added effort.

### Hygiene

- Hygiene in schools is more significant than ever and contagious diseases can spread rapidly among students in a very short time. Without proper precautions, dust, bacteria and germs, can cause diseases, as well as respiratory issues such as asthma, allergies etc. Modeo chairs are manufactured to provide the maximum hygiene in classroom environments.
- The work surface contains silver ions to make it 99.9% antimicrobial for the whole lifecycle of the product
- Large storage in the base offers a clean way to place the bags and personal belongings and helps to prevent respiratory diseases caused by dust and particles.

#### X-Base

With its large storage, the X-Base helps to keep the classroom tidy and organized by holding the personal belongings of the students.

#### Worksurface

Being the largest in its class, the work-surface easily supports analog and digital resources while being adjustable to its user's body and seating posture.

#### Monoblock Seat Shell

Aesthetic design with high ergonomics provides comfort and visually appealing spaces.

#### Castors

High quality wheels facilitate fast and easy shift between various learning activities.

Colour options

*Ruby*

*Green*

*Orange*

*Cyan*

*Yellow*

*Blue*

*Grey*

*Black*

Colours are representative and may differ depending on the material

Chair Dimensions

seat depth	43 cm
